### I. Brief Overview

---

*Note: This brief document (teaser) mostly addresses usage and deployment of Live Suggestion in a web portal or search engine. This product can be configured and/or customized for various types of merchant, ecommerce, shopping information portal sites as an interactive information delivery platform.*

Live Suggestion is a fully interactive 2-way information suggestion platform to deliver real time suggestions for search terms and/or other relevant information based on live user input. Live Suggestion is often referred to as Auto Suggest or Auto Suggestion and often found implemented in high profile sites in various ways.

**Picture 1:** A snapshot of Live Suggestion Pane (see Section IV for more pictures)

Technology behind Live Suggestion consists of 2 separate elements called *Front-End* and *Back-End* and the solution is usually delivered as a complete package including all necessary content databases. However,

customers who already have a similar service in place but seeking a better Back-End data support; can choose to purchase the Back-End package only.

The Back-End package (also known as the Server-Side Package) is available with a number of content database options.

- **International Pack** – Database Includes keyword suggestions for all popular languages. However, support for non-English and non-European languages may be limited.
- **By Industry Sector Pack** – Live Suggest Database content is lenient to a specific industry sector. Example: Banking and Finance, Computing and Internet, Science and Technology, Law, Accounting etc. or a combination of industry sectors.
- **By Language Pack** – Live Suggest Database content is lenient to a specific language. Example: English, French, German, Spanish, Italian, Dutch, Japanese, Chinese etc. or a combination of languages.
- **By Country/Region Pack** – Live Suggest Database is lenient to contents relevant to a specific country or region or continent or a combination. Example: USA, Canada, UK, Germany, France, Spain, Italy, Netherlands, EU etc.

## II. Main Features

---

1. Smart, pro-active, very fast data generation system to deliver a near real-time performance.  
Note: performance may vary depending on server type and overall connectivity.
2. Customizable output data format.  
*Note: This is useful where the Back-End is used to support a different and/or third-party and/or purpose built Front-End system.*
3. Fully independent service. No dependency on any third-party data or service.
4. Look, appearance and layout of the Live Suggest Pane where live suggestions would appear are customizable using a pre-assigned set of CSS Style attributes. No programming or scripting knowledge is required.
5. Extensive range of settings and customization options to control the appearance and behaviour.

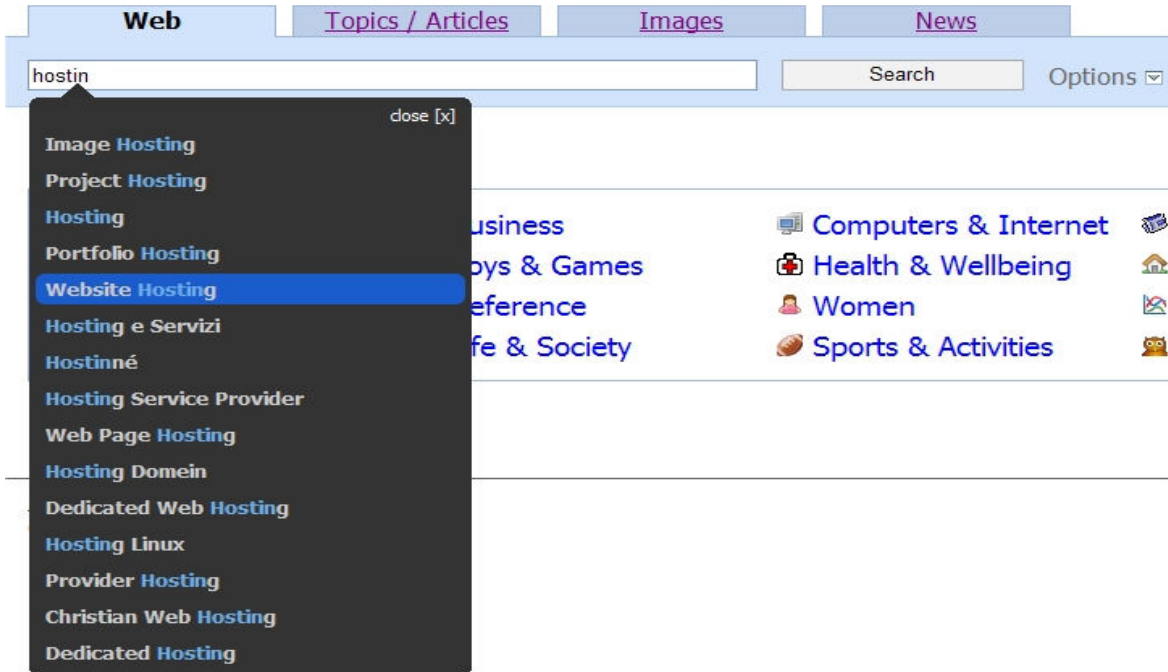

*Please note, that we also deliver various types of specialized, purpose-built built live suggestion systems using a combination of various content databases from various industry sectors, languages and regions. Please consult Sales for further details.*

## III. Complex Implementation

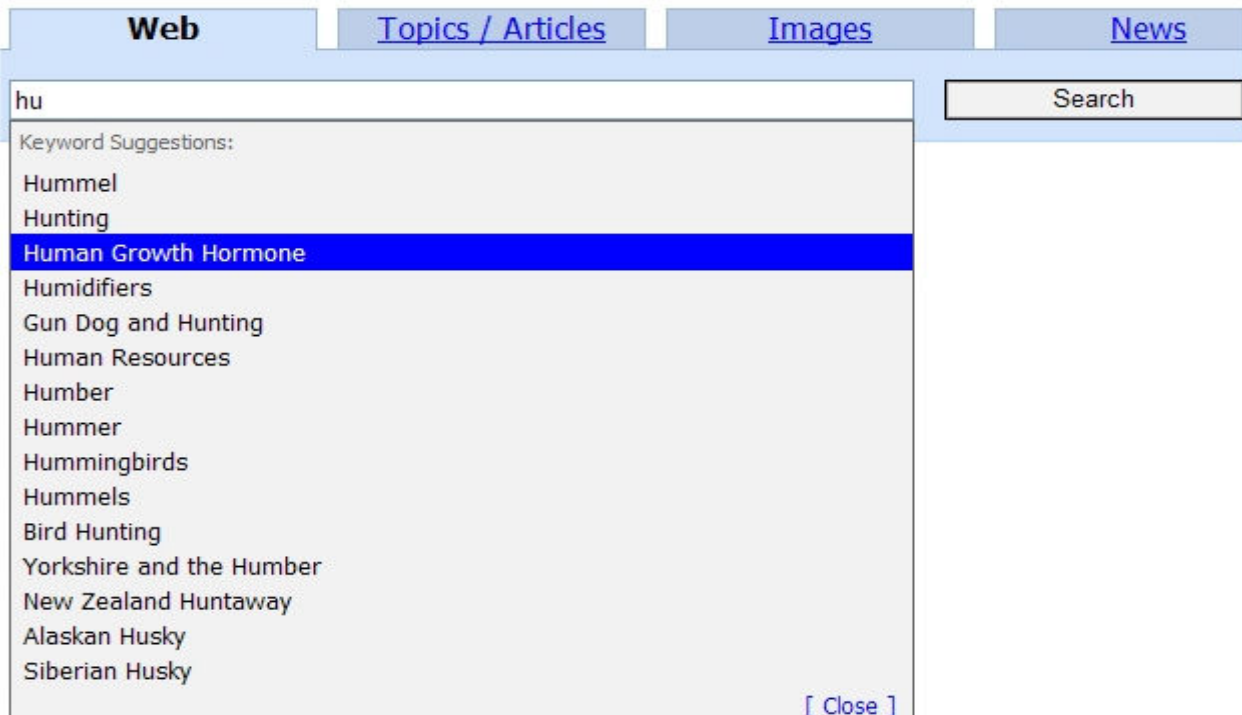

---

Live Suggest service can (optionally) be expanded by deploying various ranges of complex and sophisticated features to turn it into a multi-faceted service. Please contact sales for further information.

## IV. Examples / Pictures
